University of Patras, Greece

Acknowledgements

We would like to thank to all the partners of the “VccSSe – Virtual Community Collaborating Space for Science Education” Project for their hard and intensive work on the designing of the original version of the *Training Modules* and *Training Materials*, for delivering the training sessions and collecting the data and reflections necessary for the creation of this guide of best practices.

Special mentions must be made for the work of the colleagues who created the *Training Materials*. Their thorough and detailed work is heavily reflected in the present paper.

TABLE OF CONTENTS

I. Country requirements, traditions and issues in use of ICT for Science teaching and Learning

I.1. Science Curriculum Requirements for secondary and primary level of Physics, Chemistry, Mathematics

I.2. Trends in European countries Science teaching and learning

II. Social and Constructivist Learning Theories in the Context of Educational use of Virtual Instrumentation

II.1. What is Science Effective Teaching and Learning?

II.2. Socio-constructivist Principles and Effective learning

II.2.1. The Importance of a Student’s Actions in His/Her Learning by using VIs.

II.2.2. The Importance of Reflection in the Learning of the Individual and the Role of the Feedback Provided by VIs

II.2.3. The Role of Tools in Student Intellectual Development and the Tools Provided by tested virtual instruments.

III. Virtual Instrumentation existing options and VI selection criteria. Lessons learned in VccSSe project

III.1. Educational Software as a Very Important Element of the Learning Context

III.2. Existing Options and VI selection criteria. Lessons learned in VccSSe project

III.3. Criteria for effective design of lesson plans using VIs

III.4. Criteria for effective design of learning activities using VIs

IV. Virtual Instrumentation Software explored within the European project Virtual community Collaborating Space for Science Education

“Guidelines for Best Practices in Educational Use of Virtual Instrumentation”

Cabri Geometry II

IV.1. Educational Value and Limits of CabriGeometry II

IV.2. Basic Possibilities in Educational Use of CabriGeometry II

IV.3. Cabri Geometry II Possible Teaching and Learning Activities and Applications

IV.4. Bibliography for teachers

Crocodile Clips

IV.5. Educational Value and Limits of Crocodile Clips

IV.6. Basic Possibilities in Educational Use of Crocodile Clips

IV.7. Crocodile Clips Possible Teaching and Learning Activities and Applications

IV.8. Bibliography for teachers

LabVIEW

IV.8. Educational Value and Limits of LabVIEW

IV.9. LabVIEW Basics

IV.10. Some LabVIEW Advanced Features

IV.11. LabVIEW activities and examples

IV.12. Bibliography for teachers

GeoGebra

IV.13. First steps and applications with GeoGebra

IV. 14. Bibliography for teachers

V. Comparative reflections regarding the educational use of different VI instruments

V.1. Teachers’ voices in VI based Science Teaching and Learning

V.2. Students’ voices about VI based Science Teaching and Learning
